SUBJECT INDEX

Acetates, use in ^{2}H biosynthetic incorporation studies 242
S-Adenosylmethionine (AdoMet) synthetase ^{205}Tl NMR 455, 456
Adenylate kinase
  in vivo flux measurements 267
  multi-site exchanges 266
ADP
  extractable 257
  β-phosphate resonance 263, 265
Al nuclear shielding ^{2}H isotope effects 225
Alanine aminotransferase heteronuclear spin-echo study 283, 284, 286
Aldolase, reaction catalysed 278, 280, 288
N-Alkyl-1,4-diazinium cations ^{1}H NMR 154–158
Alkylpteridinium salts
  ^{13}C NMR 146, 149, 150, 159
  ^{1}H NMR 140–142
  structures 139
N-Alkylpyrazinium salts 112
  ^{13}C NMR 118–120, 160
  carbanion attachment to 167
  ^{1}H NMR 113–116
N-Alkylquinoxalinium salts
  amino adducts 162
  ^{13}C NMR 118–120, 160
  cyclization reactions 178
  ^{1}H NMR 114–117
1-Alkyl-1,2,4-triazonium salts
  ^{13}C NMR 122, 126
  ^{1}H NMR 123, 124
Amides ^{2}H isotope effects 222, 223
Amines ^{2}H isotope effects 222, 223
Ammonia ^{2}H isotope effects 222, 223, 236
Ammonium ion ^{2}H isotope effects 222, 223, 236
AMX spin system COSY spectra 616, 617
Antibiotics, complexes with Tl 443, 444
Aspyrone ^{17}O spectra, FID interpretation 592
ATP
  levels
    enzymes involved in 276, 289
    GPA on 269
  β-phosphate resonance 263, 267
ATP synthase, magnetization transfer measurements 265, 266
  in vivo flux 276

^{11}B organothallium spectrum 450
Biosynthesis, C–C coupling constants studies 242
Bovine pancreatic trypsin inhibitor (BPTI) ^{1}H NOESY spectra 600
m-Bromonitrobenzene ^{1}H 2D spectra 597

^{12}C, ^{13}C alanine spin-echo experiment 283
^{13}C
  acetyl groups in Krebs cycle 342, 346, 347
  L-carnitine
    derivatives and chemical shift data 365, 366
    metabolism 366
  dioxane ME analysis advantages 591, 592
  glucose
    labeling of glutamate 351–353
    metabolism
      anomer disappearance rates 345
      studies 278, 279
glutamic acid
  isotopomers 339
  labeling in Krebs cycle 346, 347
  NMR spectra 343, 345
glycerol C-2 resonances 339, 340
glycines relaxation rates 340, 341
isotope effects on nuclear shielding
  $^{n}\Delta^{13}C(C)$ 226
  $^{n}\Delta^{13}C(N)$ 229
  $^{n}\Delta^{13}C(O)$ 230, 232, 233
  $^{n}\Delta^{13}C(Si)$ 234
  $^{n}\Delta^{19}F(C)$ 228
  $^{n}\Delta^{1}H(C)$ 226
  $\Delta^{201}Hg(C)$ 229
  $^{1}\Delta^{15}N(C)$ 228
  $^{1}\Delta^{17}O(C)$ 228
  $\Delta^{207}Pb(C)$ 228
  $\Delta^{27}Se(C)$ 228
  $\Delta^{29}Si(C)$ 228
  $\Delta^{117}Sn(C)$ 228
  $\Delta^{125}Te(C)$ 228
isotopomers 338
  C-2 glycerol resonances 339
  distribution in Krebs and glyoxylate cycles 354
  glutamic acid 339, 346–353
  glycine 341
  oxaloacetate 341
  relaxation effects 340
labeling
  advantages in metabolic studies 337, 338
  metabolic models and
    glyoxylate shunt flux 353
    hexose monophosphate shunt 354
    Krebs cycle 346
NMR
  alkylpteridinium cations 158, 159
  alkylpyrazinium and alkylquinoxalinium salts 118–120, 160
  alkyltriazonium salts 126
  L-carnitine metabolism 366–368
  1,4-diazines 166
  enzyme selectivity studies 345, 346
  glutamic acid 343, 345
    biosynthesis studies 346–353, 355
  glycolytic flux studies 260
  high-order effects 342–344
  in EIE studies 245
  in vitro metabolic studies 370
    glucose turnover 376
    TPI equilibration 370–373
    trehalose biosynthesis 373, 374
    valine metabolism 371
  in vivo experimental aspects 377
  isopterins 145
  lumazine 145
  N-methylpyridopyrazinium salts 132, 133
  monitoring of hydrogen-bonding 236, 237
  pteridines 140, 143, 160
  pterins 140, 144, 145
  pyrazines 107–109, 165
  pyridine nucleotide metabolism 356–365
  pyridopyrazines 132, 160

quinoxalines 110, 112
shifts of metabolic intermediates 383
taurine 343
tetrahydropyrazines 174, 175
1-octanol spectra analysis 564
porcine insulin spectra analysis 565, 566
pyridine nucleotides
metabolism in *E. coli* 360–362
metabolism in *S. cerevisiae* 363
oxidation states and chemical shifts 356–358
salvage pathway labeling 358, 359
valine metabolism 370, 371
2-vinylpyridine spectra ME analysis merits 590, 591
Chemical exchange matrix from 2D EXSY 11–15
Chemical shifts
indirect label detection 282
superspin formalism and 310–312
Citrinin equilibrium structure 232, 233
^{59}Co nuclear shielding, ^{2}H isotope effects 226
COSY
^{11}B study of organothallium 449–451
experiment, density matrix analysis 306–309
pulse sequence 307
spectra of AMX spin system 616, 617
spectra of 4-toluene sulphonyl chloride 598
Creatine kinase
brain measurements 275
GPA inhibition 269
in vivo flux measurements 267
flux inequalities 270–276
in vitro comparisons 268, 269
shuttle model 267–270
^{31}P/^{15}N spin-echo study 283
reaction catalysed 266
CYCLOPS application 20

DANTE sequence, selective saturation and 263
Dehydrogenases in pyridine nucleotide metabolism 364
Deuterium *see* ^{2}H
1,4-Diazines, NMR and chemistry 97–195 (*see also* under compounds' names)
amino adducts 161, 162
^{13}C NMR 166
^{1}H NMR 163–165
covalent hydrates of 151
^{1}H NMR 152, 153
reduction of 168
2,6-Dihydroxyacetophenone equilibrium isotope effect 215, 217
Dihydropyrazines
^{1}H NMR 168, 169
substituents 167
Dimesityl-2,4,6-trimethoxyphenyl methane
2D ^{1}H EXSY spectra 64
modes of internal rotation 63
structure and skeleton site labeling 62

E. coli pyridine nucleotide metabolism, ^{13}C NMR studies 360–362
Enzyme kinetics, NMR applications to 257–290 (*see also* individual enzymes)
concentration change measurements 260
design of experiment 290
flux control coefficients 258, 259
lineshape analysis 261
magnetization transfer 261–277
non-invasive studies 258
spin–spin coupling 282–287
Erythrocytes
adenylate kinase studies in 266, 267
^{13}C NMR 278, 279
^{1}H NMR 260, 281
^{2}H NMR 282
lactate dehydrogenase studies in 281
multienzyme systems in 287
^{31}P NMR 259
EXSY *see* Two-dimensional exchange spectroscopy

^{19}F
in EIE studies 245
in SIIS studies 239, 240
nuclear shieldings
^{13}C effects on 228, 229
^{18}O effects on 234
on ^{34}S 235
solvent effects on 220
FID
derivation 519
truncation in analytical manipulation 601
Fourier transformation
discrete (DFT) 522
advantages 524
best fit spectrum and 568
2D applications 567
disadvantages 525–529, 565, 566
series 520
spectrum comparison with ME 590–593
transform 521
2D 3
two domains 522
Z transform and 621, 622
2-Furoic acid ^{1}H spectra, FID interpretation 593

Ga nuclear shielding, ^{2}H isotope effects 225
Glasses Tl-containing 446
Glucose turnover studies 376
Glyceraldehyde-3-phosphate dehydrogenase (GAPDH)
^{1}H NMR study 259
in multienzyme system 288
inhibition 258
^{31}P saturation transfer measurements 276, 289
Glycolytic enzymes, NMR studies 278–280, 287, 288
Glyoxylate shunt flux through 353
Gramicidin, Tl NMR studies 456, 457
β-Guanidinopropionic acid (GPA) inhibition of creatine kinase 269

^{1}H NMR
alkyldiazonium cations 154–158
alkylpyrazinium salts 112–118
alkylquinoxalinium salts 112–118
alkyltriazonium salts 123, 124
1,4-diazine adducts 164, 165
^{13}C glutamate 353, 355
^{13}C glycines 341
dihydropyrazines 169
dihydroxydiazines 153
2,3-disubstituted pyrazines 103
EIE studies 245
enzyme inhibition studies 259
in vivo experimental aspects 378
N-methylpyridopyrazinium salts 131
monosubstituted pyrazines 102
amino adduct 161

of NAD^+-dependent processes 260, 261
pteridines 135–137
pterins 138
pyridopyrazines 129, 130
quinoxaline adducts 163
spin-echo experiments 284
5-substituted quinoxalines 105
6-substituted quinoxalines 106
tetrahydropyrazines 170, 171
1,2,4-triazines 120–122
^2H
EIE studies 245
incorporation in biosynthetic studies 242
isotope effects on nuclear shielding 213–226
$^1\triangle Al(^2H)$ 225
$^n\triangle ^{13}C(^2H)$ 213
aliphatics 217
aromatics 214
assignment 214
carbonyl compounds 214–216
ions 216
of hydrogen-bonded compounds 238
over 3 bonds 216
saturated compounds 219
SIMPLE 214
solvent effects 215
structural effects 217, 218
$^1\triangle ^{59}Co(^2H)$ 226
$^n\triangle F(^2H)$ 220, 221
$^s\triangle F(^2H)$ 239
$^1\triangle Ga(^2H)$ 225
$^n\triangle ^1H(^2H)$ 217, 218
$^n\triangle ^2H(^2H)$ 219
$^n\triangle ^3H(^3H)$ 219
in β-thioxoketones 247
$^1\triangle N(^2H)$ 222
$^n\triangle N(^2H)$ 224, 225
$^1\triangle ^{17}O(^2H)$ 224
$^n\triangle ^{31}P(^2H)$ 225
Heptamethyl benzonium
^1H 2D EXSY spectra 15
1,2-methyl shifts in 43, 52
rotationally equivalent permutations 44
symmetry equivalents 43, 48
Hexose monophosphate shunt, flux through 354
^{201}Hg nuclear shielding ^{13}C and Si effects 229
Hydrogen bonding 235–238
β-Hydroxybutyrate dehydrogenase exchange velocity measurement 288

INADEQUATE in EIE studies 246, 247
INEPT ^{13}C dioxane spectra 591
Isomerizations
degenerate 41–66
magnetic site exchange matrix 56, 57
2D EXSY map and 59
magnetic site theory 55
modes of 47–50
NMR observations 53
selfinverse and non-selfinverse 45, 61
within "supermolecule" 81
nondegenerate 66–72
"compound 3" 67
modes 67
NMR observations 68
permutational description 66
pseudodegenerate 72–81
scope and limitations of concept 81
tetraphenyl cyclopentadienone 72, 73
tetra-*o*-tolyl cyclopentadienone 74–81
Isotope effects on nuclear shielding 208–249 (*see also* individual isotopes)
bond length and order 243
coupling constants 243
equilibrium studies
acid–base 246
conformational 246
^1H–^2H 247
ionic compounds 245
^{15}N 248
tautomeric 246
hybridization 243
miscellaneous isotopes 231–235
nomenclature 209
nuclear shielding tensors correlations 244
primary 248
stereospecificity 244
substituent effects 245
substituent parameters correlations 244
techniques 248
theory 210
additivity 212
$\triangle$ vs δ 212
$\delta\sigma/\delta\triangle r$ 212, 213
symmetry 211
Isotope exchange, NMR measurements
$^{12}C/^{13}C$ 277
chemical shifts 282
$^1H/^2H$ 280
label pairs used *in vivo* 277
multiply-labeled substrate 286
$^{14}N/^{15}N$ 279
spin–spin coupling 286
Isopterins ^{13}C NMR 145

J-cross peaks 30, 31

Krebs cycle
^{13}C oxaloacetate labeling in 341, 342
glutamate labeling during 346–353
isotopomer distribution in 354
label scrambling in 346

Lactate isotope exchange studies 284–288
Line-shape analysis 2
Linear prediction 531, 536, 548–553 (*see also* NMR spectroscopy, modelling)
SVD 563–567
Liouville space in superspin formalism 297, 299, 302, 312, 315
Lumazine ^{13}C NMR 145

Macromolecular liquids, tube concept 385–420
abstractions
bead-spring model 389
contour length fluctuation 396
defect diffusion models 392
Kuhn chain 388
local jump model 391
reptation 393
tube models 391
classification 387
correlation function of segment orientation, rationale 398
three component 401, 409
correlation functions, NMR techniques 401

field-cycling relaxation spectroscopy 403, 404, 414
from orientation correlation function 402
results 408
characteristic molecular weights 409
diffusion coefficients 412
samples and apparatus 409
swollen polymers 416
T_1 frequency dependence 414
T_2 temperature dependence breaks 410
spin-state order relaxation 405
translational diffusion coefficient 407
transverse relaxation 403, 414
two-dimensional exchange spectroscopy 406
symbols 385, 386
Magnetization transfer, applications in enzyme kinetics 261–277
assumptions
measured exchange and net flux 266
two-site exchange 265
equilibrium constant on 264
selective inversion 262
selective saturation 262
DANTE and 263
two-dimensional exchange experiments 263
NOESY and 264
Maximum entropy (ME) *see* NMR spectroscopy
cis-1,2-Methyl shift 42, 43, 48
N-Methylpyridopyrazinium salts
^{13}C NMR 132, 133
coupling constants 134
^{1}H NMR 131
Molecular weights of polymers 409–419

^{14}N
isotope effects on nuclear shielding
$^{n}\triangle^{13}C(N)$ 229
$\triangle^{15}N(N)$ 230
$^{1}\triangle^{31}P(N)$ 230
$^{2}\triangle^{77}Se(N)$ 230
$^{1}\triangle^{29}Si(N)$ 230
NMR, triazines 127, 128
^{15}N
in EI studies 245
NMR
pterins 150
pyrazines and quinoxalines 111, 112
pyridopyrazine 133
reduced pterins 175–177
triazines 127, 128
nuclear shielding
^{13}C isotope effects 228
^{2}H isotope effects 224
^{14}N isotope effects 230
^{18}O isotope effects 234
$NAD^+/NADH$ ^{13}C incorporation into 357, 358
Nicotinamide
derivatives ^{13}C chemical shifts 356, 357
on NAD^+, NADH levels 358, 360
4-Nitrophenol ^{1}H 2D spectra 599

IR experiment 328–330
two unknown parameters
FIR experiment 326, 327
IR experiment 324–326, 334
$M(\infty)$ estimations 323, 327

S. cerevisiae
L-carnitine metabolism 366, 367
pyridine nucleotide metabolism, ^{13}C NMR 363
Scrambling, intermolecular degenerate and pseudodegenerate 81–84
^{77}Se nuclear shielding 235
^{14}N effects on 230
Semiconductors, Tl-containing 445, 446
^{29}Si nuclear shielding
^{13}C effects 228
^{14}N effects 230
on ^{13}C 234
^{117}Sn nuclear shielding, ^{13}C effects 228
^{119}Sn
2D EXSY 82–84, 86
^{2}H isotope effects 226
Solvent effects on nuclear shielding 215, 220–224
SIIS studies 239–242
^{19}F 239, 240
halide ions 241, 242
metal ions 240, 241
^{195}Pt 242
Spin-echo
correlated spectroscopy (SECSY) pulse scheme 32
techniques in IENS studies 248
Spin–spin coupling applications in metabolic studies 282–287
Stereochemical processes *see also* Isomerizations
classification 41–84
future applications of 2D EXSY 84–88
Sucrose hydrogen-bonding structure 218, 220
Superspin formalism *see* NMR spin dynamics

α-Talopyranose flip-flop hydrogen bond 214, 216
Te nuclear shielding 235
Tetrahydrofolic acid structure 173–176
Tetrahydropterins
enzymic hydroxylation and 98
condensed, ^{13}C NMR 186
condensed, ^{1}H NMR 186, 187
^{15}N NMR 175–177
stereo-structure 173
Tetrahydropyrazines
^{13}C NMR 174, 175
condensed, structural elucidation 177–195
^{13}C NMR 186, 188
^{1}H NMR 186, 187
^{1}H NMR of C-monosubstituted 168, 170
^{1}H NMR of disubstituted 171, 172
ring conformation 173
substituents 167
Tetrahydroquinoxalines *see also* Tetrahydropyrazines
acylation 171–173
condensed with 5-membered rings 178, 179
^{13}C NMR 184–186, 188
^{1}H NMR 178–183
stereo-structures 182, 183
condensed with 6-membered heterocycles 188, 189
^{13}C NMR 193–195
^{1}H NMR 188, 190–192
stereo-structure 192
Tetraphenyl cyclopentadienone
desymmetrization and stereochemical information 74, 76
geometry and skeleton site labeling 73
Tetra-*o*-tolylcyclopentadienone
as model for tetraphenyl cyclopentadienone 76
^{1}H 1D NMR 77, 79
^{1}H 2D EXSY studies 5, 77–81
rotamers of 75
Thallium, general properties 424, 425
Thallium NMR spectroscopy 423–507
biological applications
AdoMet 455, 456
gramicidin 456, 457
transferrin 457, 458
chemical shielding anisotropies, table 469–473
coupling constants, tables of
dialkylthallium compounds (C and H) 481–484
diarylthallium compounds (H and F) 491
diorganothallium compounds (H) 485, 486
miscellaneous (C) 504, 505
miscellaneous (H) 498–503
monoalkylthallium species (C and H) 487, 488
monoarylthallium compounds (C) 494
monoarylthallium compounds (H and F) 492, 493
porphyrin derivatives (C) 496
porphyrin derivatives (H) 495
triorganothallium compounds 478–480
vinyl and divinyl thallium derivatives (H) 489, 490
Knight shifts, table 474, 475
linewidths and second moments, table 469–473
organothallium compounds in solution 447–451
resonance frequencies and chemical shifts, table 459–467
solid state and melt studies 425–447
acetate 442, 443
antibiotic complexes 443, 444
chemical shift discontinuities and phase transitions 477
formate 431
glasses 446
halides 441
mixed $Tl/X/NO_3$ 432–437
organothallium compounds 445, 446
paramagnetic compounds 445
perchlorate 435–440
semiconductors 445, 446
temperature dependence of shifts 476
Tl (III) salts 445
^{203}Tl–^{205}Tl spin exchange 441
zeolites 447
spin-lattice and spin-spin relaxation rates, table 506, 507
Tl(I) solution studies 451–454
Tl (III) solution studies 454
^{203}Tl and ^{205}Tl compared 424–430
^{203}Tl and ^{205}Tl properties of nuclides, table 458
Time proportional phase incrementation (TPPI) procedure 23, 25, 27
Transferrin Tl NMR studies 457, 458
Trehalose biosynthetic pathway 373
1,2,4-Triazines
^{13}C NMR 122, 125
^{1}H NMR 120–122
^{14}N and ^{15}N NMR 127, 128
Triose phosphate isomerase (TPI)

reaction catalysed 278, 280, 288
reaction equilibration 370–373
Two-dimensional correlation spectroscopy (2D COSY) 30, 33
Two-dimensional exchange spectroscopy (2D EXSY)
applicability of classical model 4
basic experiment, classical analysis 6–11
basic pulse scheme 5
^{13}C 85
chemical exchange matrix from 11–15
first order approximation 12
comparison with SECSY scheme 32
future possibilities 84–88
^{1}H 64, 78–81, 85, 86
in biological systems 86, 87
intermolecular scrambling and 81
line-shapes 26–28
magnetic site concept and 55, 56
magnetic site exchange matrix and 56–61
nondegenerate isomerizations and 68
of "compound 3" 68, 69
of dimesityl-2,4,6-trimethoxyphenylmethane 64
of SnX_4 82–84
of tetra-*o*-tolylcyclopentadienone 77
^{31}P 69, 87
pseudodegenerate isomerizations and 74, 76
quantitative 37–41
selfinverse and non-selfinverse degenerate isomerizations and 61
spectrum with two exchanging magnetic sites 18–26
stereochemical exchange of coupled spins 30, 31
undesirable features and elimination of 15–30
auto-peak suppression 33–37
axial peaks 16
mirror image frequencies 17
parasite transverse magnetization 16
t_1 noise suppression 29
use of phase cycling scheme 23, 26
Two-dimensional nuclear Overhauser enhancement spectroscopy (2D NOESY) of proteins 3, 27
Two-dimensional skewed exchange spectroscopy (2D SKEWSY) 39, 40

Zeolites, Tl in 447
